*Claimant had already paid $5500. on the bulldozer which the company had agreed to refund him for the bulldozer. Custodian went him the difference between the appraised value ($5000) and the amount still owing the company. (So the company got paid in full and then bought the dozer for $5000 from the Custodian ≡ a profit of $2600.)

Quite often notes are linked together by a bar.

- notes are usually linked together to indicate a quick succession of notes.

Then there comes technique; combinations of words and symbols indicating how the composer intended the piece to be played. I couldn't even begin to list them all for you here. It would be best to go to a music store and obtain an elementary rudiments book. The University has some excellent books on music theory. If there is anything else I can help with, let me know.

All of this is very basic. There is alot to the composition, reading and playing of music. The systems though, are logical and quite mathematical. The end result of course is beautiful.

Looking at a piece of music you will notice (in most cases) that the bars (horizontal) are divided vertically by lines. The distance between each of these vertical lines is called a measure. Time value is assigned at the beginning of each piece: 4/4, 3/4, 2/4 are the most common. EG. 4/4 means that 4 beats are allotted each measure. Those four beats are then divided to the notes that occupy that measure. Quite often you will see rests occupying all or part of a measure. These indicate a silence at that point.
Sharps and Flats will also be indicated at the beginning of a piece. They will never be mixed. You will either play the piece in a sharp key or a flat key. The sharp or flat symbol will sit on the line or space indicating which note is to be sharpened or flattened. Once you know your scales you will be able to tell by the nature and number of flats or sharps which key you are playing in. Sometimes, just for the heck of it composers throw in occasional flats or sharps throughout a piece. They will be indicated by the sharp or flat sign appearing directly before the note that is to be altered. Once you have altered that note you must continue playing it that way until you see the natural sign ♮ , then you must play that note as it naturally appears in that key.

The music scale is composed of whole tones and semi tones. A tone represents the distance between two or more notes on the scale. For example the distance between the note "C" and "D" is a whole tone; the distance between the note "G" and "B" is two whole tones. Semi tones come into the picture when sharps or flats are added to the scale.

Every note in the scale - C D E F G A B C - has a scale of its own originating from that note. There are four basic types of scales: major, minor, melodic and harmonic. For now let's look at the major scale. You are no doubt familiar with the tune DO RA ME FA SO LA TE DO. The point in a major scale is to play that perfect major scale from any note on the scale. If you have ever played a piano and tried this you will notice (quite quickly) that this is not possible using only the white keys. It becomes necessary to add the black keys - these keys create semi tones - i.e. they shorten the distance between two adjacent notes by half. When you raise a note a semi tone you <u>sharpen</u> the note, when you lower a note a semi tone you <u>flaten</u> the note - hence, "sharps" and "flats." EG.

(1) Not available. (2) For comparison with the later censuses, deductions have been made as follows: 961 plots under 1 acre in 1891; 238 in 1901; and 1,509 in 1911. (3) "Full ownership" means that the operator holds the title to all the land which he operates. It does not necessarily mean that the farm is free of debt. (4) A correction of the 1931 figures. (5) Includes farm gardens and orchards, see page xx for "Explanation of Terms". (6) Includes area in gardens. (7) Includes area in nursery. (8) Enumerated on "Fruit and Vegetable" schedule. (9) Nursery only. (10) Small fruits only. (11) In 1921, idle land was included with fallow. (12) From 1881 to 1941, figures include live stock and farm products elsewhere than on farms. (13) From 1881 to 1911, the item was "milch cows". (14) Cows and heifers 2 years and over, kept for milk production. (15) Includes automobiles. (16) Does not include

POSITION NUMBER:

2. POSITION SUMMARY Continued

As the person progresses to Systems Analyst III, the responsibilities will be characterized by increasing scope, level of assignments and autonomy afforded to the position.

The Systems Analyst III is the full working level for employees who perform the more complex systems and programming tasks and assign the less complex tasks to subordinate staff. Some positions in this class entail supervisory responsibilities over subordinate analysts and programmers and other technical and clerical staff. Although guidance is afforded by the project leader or senior analyst (SA IV) when unusual or highly complex problems are encountered, assignments are generally reviewed only upon completion. In a production environment this individual would have primary responsibility for the production support of a large system or several small to medium systems.

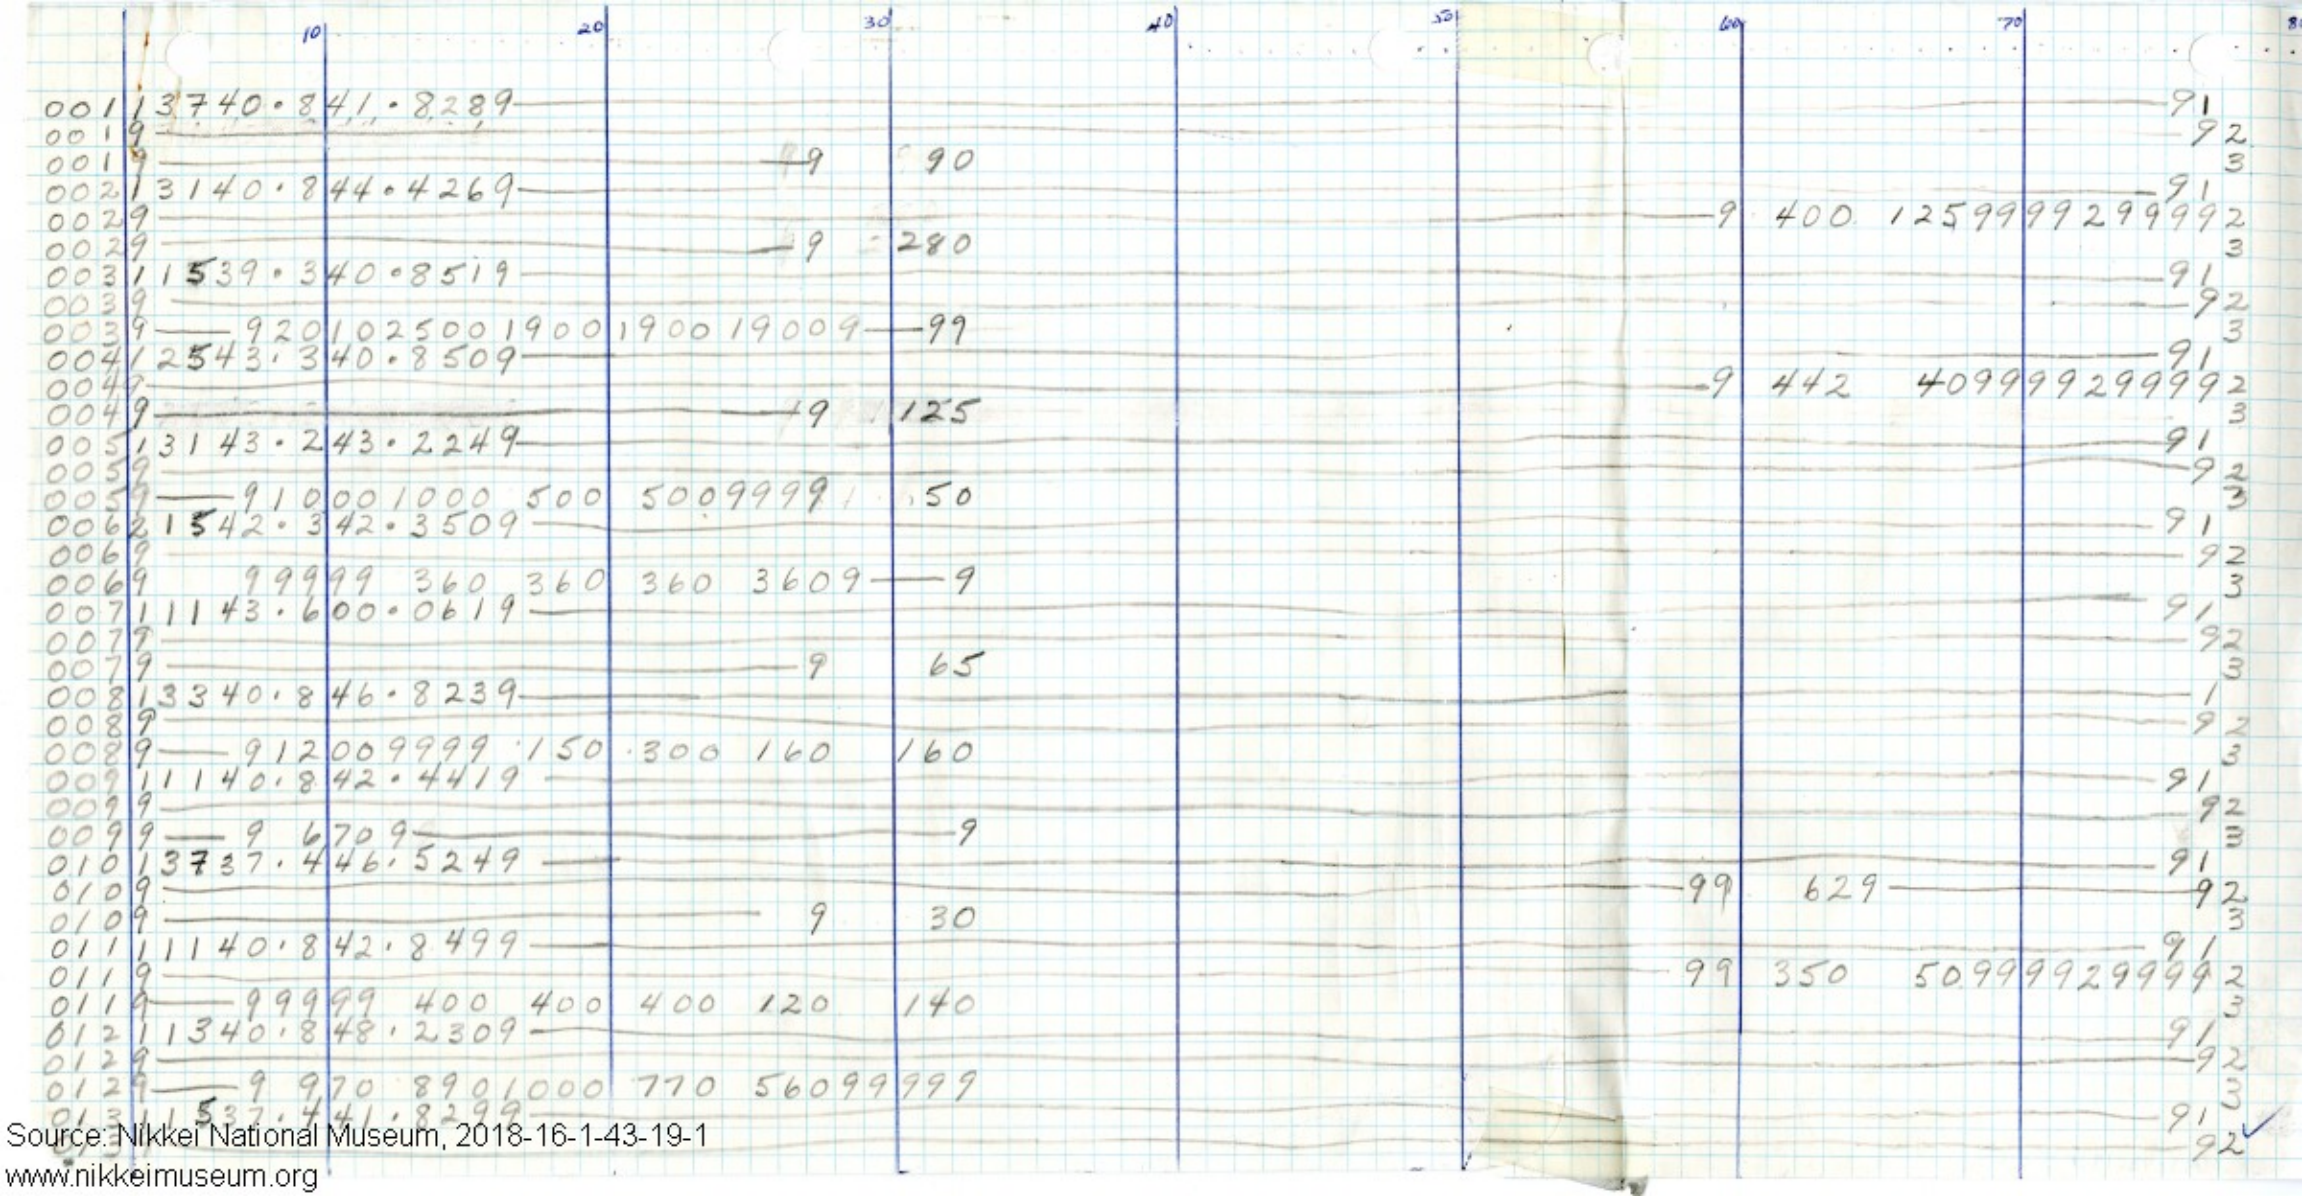

3. POSITION DUTIES AND RESPONSIBILITIES Continued

Supervises and co-ordinates subordinate analysts and programmers and other technical and clerical staff (including assisting in their development and performance appraisal).

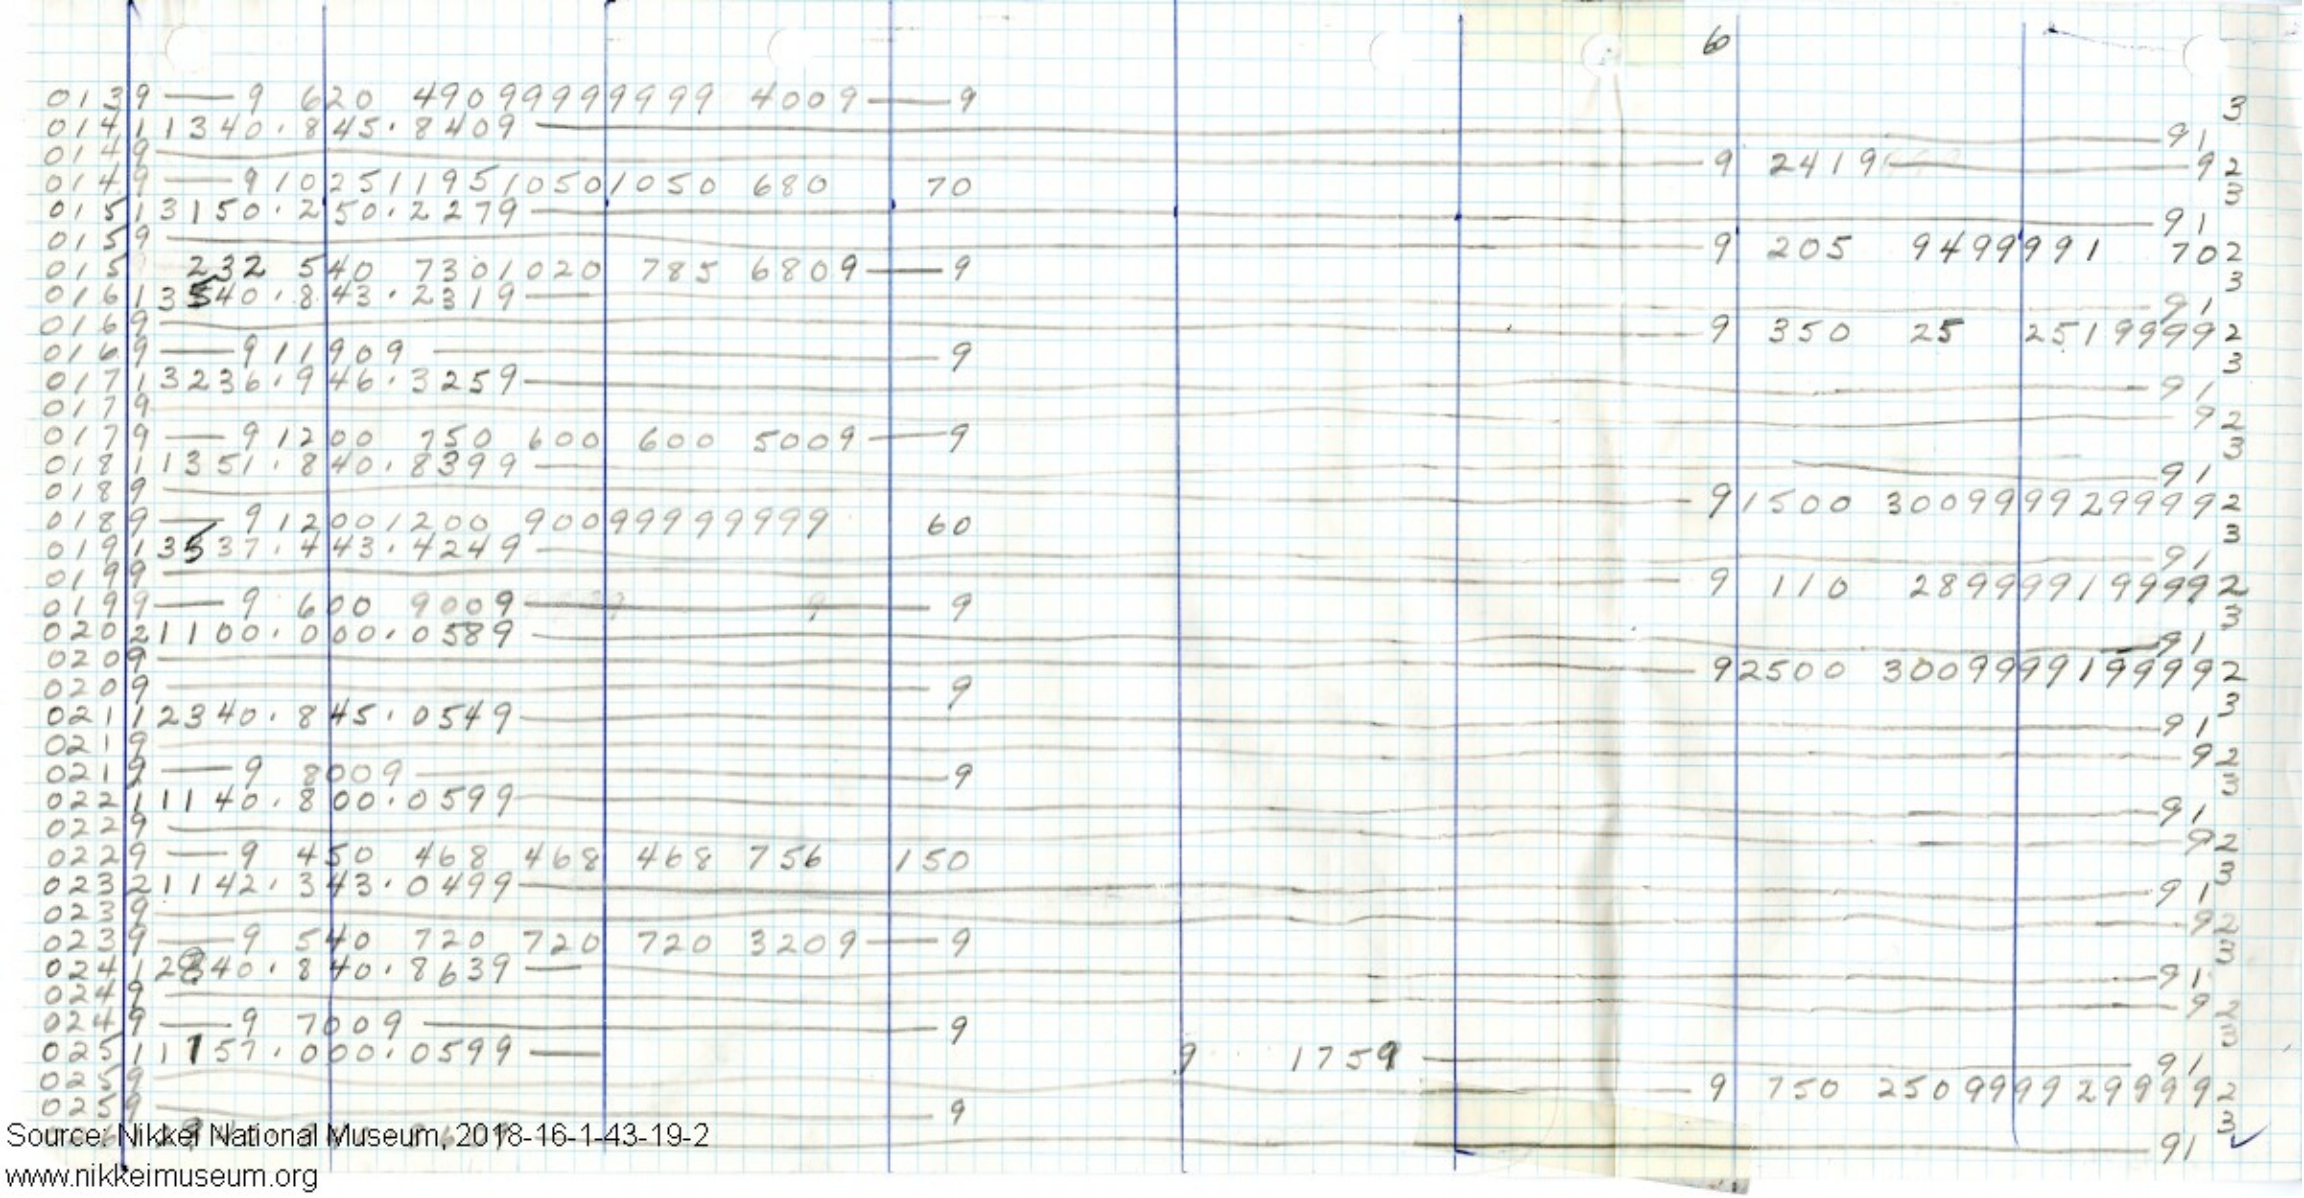

Ensures all work performed conforms to Computer & Research Services standards.

Performs related work as required.
